

ANTHROPOLOGY

Anthropology is the comparative study of humanity, focusing on people in all places and throughout history and prehistory. Courses engage students in the analysis of beliefs, values, and practices from a perspective that understands societies on their own terms. This perspective includes comparing the similarities and differences among different groups and appreciating and valuing different ways of living. Students study other cultures in order to learn more about their own. This curriculum affords students the opportunity to see the interaction between “what we know” and “what we do” that lies at the heart of the study of humanity.

Our curriculum combines the best parts of a critical, creative, liberal arts education with practical, professional preparation. The major courses direct the student toward the subfields of archaeology, biological anthropology, cultural anthropology, and linguistics, with a focus on applied research in these sub-fields. As part of the major, students engage in several research projects, including those that expose them to the application of anthropological knowledge for non-academic audiences, and to archaeological field methods. Out-of-class research projects in the City of Chicago are integral components of several courses. Students graduate with an extensive knowledge of how anthropology is actually done. We bring students farther into this practical side of the discipline than any other BA program in the country.

Academic careers are attractive to some graduates, but well more than half of all professional anthropologists work outside of academic institutions. Some of these careers include research for public and private organizations; UX; administration and/or public policy on the local, regional, federal, or international level; research and work in museums; intercultural communication; advertising, marketing, and public relations; human resources; public health; health care; and law. Anthropologists also frequently work at non-governmental and international organizations. Within the context of administration or public policy, anthropologists are engaged in cultural resource management (CRM), monitoring the preservation of cultural resources for national parks, museums, and state or municipal cultural institutions (i.e., parks and historical societies). Anthropology enhances other career paths, such as modern languages, international studies, international relations, cultural studies, and international business. Students will have attained transferable skills through real world experience during their education that will prepare them for direct entry into many fields of employment.

Faculty

Jane Eva Baxter, PhD
Associate Professor and Chair
University of Michigan, Ann Arbor

Marcia Good, PhD
Senior Professional Lecturer
University of Florida

Nila Ginger Hofman, PhD
Professor and Director Community Service Studies
Purdue University

Morag Kersel, PhD
Associate Professor and Director Museum Studies Minor
Cambridge University

Larry W. Mayo, PhD

Associate Professor
University of California, Berkeley

John Mazzeo, PhD
Associate Professor and Director Master of Public Health
University of Arizona

Robert Rotenberg, PhD
Professor/Vincent DePaul Professor
University of Massachusetts

Rachel Scott, PhD
Associate Professor
University of Pennsylvania

Alexandra Sumner, PhD
Professional Lecturer
University of Toronto
